

Situation Update:

- All ten Départements in Haiti are now affected by the Cholera.
- Artibonite remains the worst affected Département, where more than 650 out of 1,186 Cholera deaths have been recorded.
- The Ministère de la Santé Publique et de la Population (MSPP) reports that 19,646 people have been hospitalized since the outbreak. Altogether 49,418 people have sought medical attention to date.
- The number of recorded cholera cases also increases in Port-au-Prince, especially in Cité Soleil, an extremely impoverished and densely populated commune west of the capital, as well as in Port-au-Prince's largest prison, where 30 inmates have been infected. Altogether 46 deaths have been reported in the Port-au-Prince metropolitan area.

Beside Cholera issue, we are now dealing with a deteriorating security situation of civil unrest with various street demonstrations in Cap-Haitien in the North, Hinche in Plateau Central department and Port-au-Prince. The protests and riots are against UN peacemakers who are being blame for bringing the cholera in Haiti as well as against presidential and parliamentary elections on Nov. 28.

END.

Regards,
Elvire
